Wigginton, Oxon: Mollusca

The following marine shells were identified from this Romano-British site.

Lab.no.

| | | |
|--------|--------------------------------------|----------|
| 681248 | <u>Ostrea edulis</u> Linné, Oyster | 2 valves |
| 681249 | <u>Mytilus edulis</u> Linné, Mussel | 1 valve |
| 681250 | <u>Buccinum undatum</u> Linné, Whelk | 3 |

These represent human food debris. Two of the whelk shells have the body whorl broken, probably deliberately to aid the extraction of the animal; the third was intact.
