The animal bones

The District Heating Scheme

The Animal Bones

A small group of animal bones was recovered from Roman deposits, the following species were identified; ox (Bos domesticus), ovicaprid (Ovis domesticus/Capra domesticus), pig (Sus domesticus), and domestic fowl (Gallus domesticus). The table summarises the bones from each feature.

Table

	ox	stg	pig	lar	sar	fowl	unid	total
<i>Area A. Post dating destruction of Building I</i>								
F1 25	1	2	6	14	1	-	7	31
<i>Areas B&C. Pre-building Activity</i>								
F6 27	-	-	1	8	8	-	15	32
<i>Areas B&C. Construction of Buildings I&II</i>								
F6 28	-	3	1	-	3	-	-	7
<i>Area E. Layers pre-dating the ditch</i>								
F14 12	2	-	-	7	-	-	-	9
F14 11	2	-	-	-	-	-	-	2
F14 10	-	2	-	-	4	-	-	6
F14 7	-	-	8	-	-	-	-	8
F14 4	-	-	-	3	1	-	-	4
<i>Area E. The Ditch</i>								
F14 9	-	-	-	-	-	2	-	2
F14 1	17	-	1	11	-	-	-	29
F15 1	-	2	1	-	2	-	-	5
<i>Area G. The Riverbank</i>								
Th 1 2	-	-	-	1	-	-	-	1
total	22	9	18	44	19	2	22	136

lar = ox-sized frags

sar = sheep/goat sized frags

The bones were recorded and measured using the method of Jones et al 1981. A copy of the archive is housed at SLAEC. The number of bones is too low to warrant any discussion of butchery techniques etc. The total length of a single ox metatarsal suggested a withers height of 114 cms (F14 1) using Fock 1966, and the total length of an ovicaprid metacarpal a withers height of 54 cms (F15 1) using Teichert 1975. Many bones show evidence of butchery in the form of chop marks and it is probable that this material is food debris.
