Numbers 727084 - 726090A include pieces, in some cases complete halves, of acorn fruits of Quercus sp. 1724 726090B included two small pieces of the outer fruit, but not the cupule. Had the cupule been found the scales would have given the precise species.

The scales of the cupule, being small and delicate could quite easily have been overlooked in the preparation of this material.
