

HAUGHMOND ABBEY (Augustinian), Salop.

- 767283 Muastone
- " 284 Very fine-grained, dark, micaceous sandstone
- " 285 -do-
- " 286 -do-
- " 287 -do- reddish
- " 288 -do-
- " 289 -do-
- " 290 -do-
- " 291 Crystal of barytes (natural crystal fracture)
- " 292 -do-
- " 293 Quartzite or possibly vein quartz.

The site is on the Pennant (Barren Coal Measures) Series. All the stone samples from this site could be local material from the Longmynd-Church Stretton area to the south where there is a great variety of dark coloured flagstones, quartzites etc.
